

Task 2.5

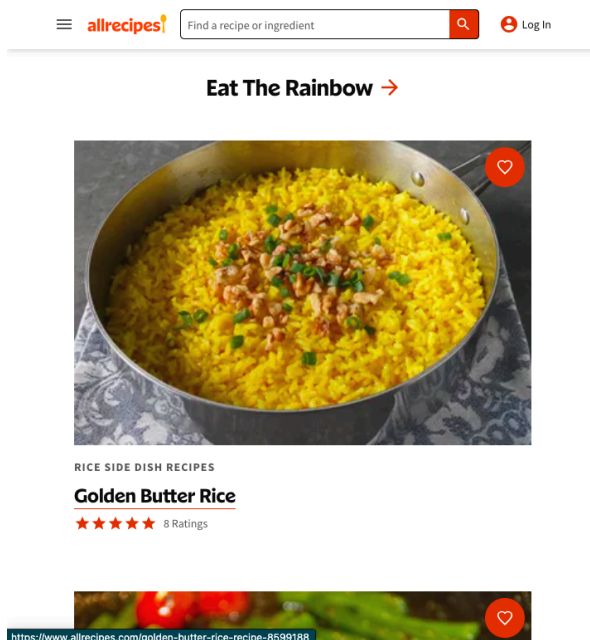

Changes to Models

- User model: deleted user model completely
 - Rationale: Since I will be using Django's auth system, I only included a 'name' attribute for the user. After further research into Django's documentation, I found that the framework's auth system user objects include first_name and last_name attributes, rendering my original User model unnecessary.
- Recipe model: change upload location for images from 'images' folder to 'recipes' folder
 - Rationale: After learning more about uploading images in Django from this exercise, I decided to update the name of the directory where recipe images will be stored.

Recipe Apps: Frontend Inspirations

- <https://www.allrecipes.com/>

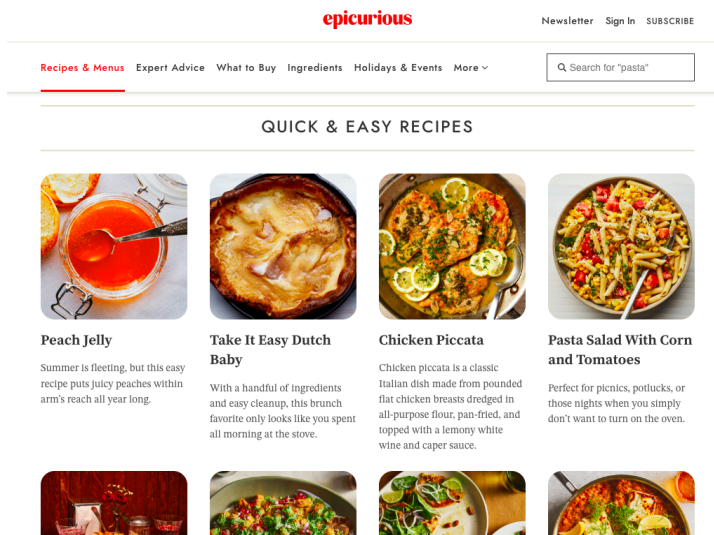

○

- I like the clean design of this site and the way the orange stands out amongst the images and white background. The content is easy to read and parse through, and the recipe pictures stand out more because of the simple overall design.

Derby Pie Is Pecan Pie for
Chocolate Lovers

-
- Another clean design with a simple color scheme. I also like how they used columns to display the recipes both symmetrically and asymmetrically to add variety to the layout.
